Overall Information

Passionate and curious Web Developer with a creative eye for detail and a heart for problem-solving. Though new to the field, I've already built a few projects that showcase my ability to transform ideas into functional, user-friendly websites. I honed my skills through the Web Development course at Programming Hero, where I learned the MERN stack. Additionally, my training in MS Office from the Department of Youth Development in Bangladesh helped me improve my documentation skills.

What sets me apart from other applicants is my unwavering willpower and determination. Self-learning things have made me fall in love with coding and technologies in general. Now, I want to join a team where I would get the opportunity to learn a lot and implement them in problem-solving projects.

Projects

- **Real Estate Full-Stack Application** ([View Project](#)): Real Estate platform made in React. It has some awesome features, and this project helped me learn authentication and authorization in depth. The frontend was done using React and TailwindCSS. Vite was used as the build tool. I used functionalities like React Hooks, Context API, Dynamic Routing, etc. For most of the backend work, I relied on Firebase. I used Firebase for authentication, User Management, and React Router for authorization.
- **React Bookstore Application** ([View Project](#)): React bookstore application utilizing Javascript Local Storage functionality. The web app has features like accessing books from the library, viewing book details, adding them to the "Already Read" list or the Wishlist, and removing them from lists. This is a basic web app. While developing it, I got comfortable working with JSON and Browser Local Storage.
- **React Restaurant Website** ([View Project](#)): React restaurant website landing page. I am mentioning this because it has a balance of design and functionalities. Functionalities are rather simple, but the interface of the website is attractive which makes it a good portfolio item. It was done using Tailwind and Reactjs. Functionality is just menu-related. So you can add cooking items and remove them and the calculations would be done accordingly.

Skills

- TailwindCSS | JavaScript | TypeScript | NodeJS | Express | React | jQuery | Git & Github
- Wordpress | Full-Stack Development | Basic Figma
- Microsoft Office | English Communication: Fluent

Experience

- **Sales Officer** Car Point BD
(Jul 2023 - Dec 2023)
My main responsibility at Car Point BD was to first input customer data into the spreadsheet. Then I would communicate with them and give answers to their queries, and if their needs fit with our product, I would tell them about it. My primary goal was to sell the products while I had other activities like giving presentations sometimes or maintaining their social media page.

Involvements

- **Programming Hero:** Learned Full-stack Software Development from Programming Hero
- **Freelance Project:** Helped a client with his Wordpress website on Fiverr
- **Contractor:** Oversaw multiple projects under the Department of Fisheries and Aquaculture of our Country Government.
- **Youth Development Course:** Completed a course in MS Office and got certified by the Department of Youth Development, Bangladesh.
- **Venture:** Got an ongoing business venture about selling wellness products online. (Have not committed much time since I got into Tech)

Education

Master of Business Administration

National University

Gazipur, Dhaka Session: 2020-2021

- Subject: Management

Hobbies

- Singing
- Getting to know and talk on various things with intellectual people; I love this.
